

# Enhance the Wellness of Your Clients

- VoiceHealth was created to provide an extra layer of protection using personalized data to monitor client safety and wellness.
- VoiceHealth is an excellent program to assist your client or loved one who wants to remain in his/her home.
- To start, a nurse from our care team will learn about a client's health, wellness history and concerns.
- VoiceHealth is a program that utilizes a patented voice-activated, hands free 24/7 emergency response system (wearable alert buttons are not necessary) that asks you questions each morning related to your health and well being.
- The VoiceHealth system has the ability to send your contacts an alert if follow up, variations or changes need to be communicated. Notifications can be directed to designated contacts, caregivers or agency personnel.
- A nurse from our team will be reviewing any fluctuations noted and will reach out to designated contacts, if necessary.

# Enhances Your Home Care Business

Offer your client our Alexa enabled proprietary software to record health conditions daily. Keep your agency and family members on top of the data to protect the safety and well being of the client.

Physicians, treating patients with highly prevalent, chronic disorders such as congestive heart failure and diabetes shifting between periods of stability and instability, welcome consistent patient home data. The goal is to reduce the frequency of emergency room and hospital stays.

- Add clinical monitoring to your Care Plan
- Stand out from your competition
- Help Keep Client safe and well between home care visits
- Diversify by adding a new revenue generator

SmartCompanion Care, LLC part of the Veterans Home Care family of companies. Veterans Home Care is not part of any government agency and is not affiliated with the Department of Veterans Affairs (VA)
